Skill Set

**TAFE Course Number 20014
National Code 22105VIC**

Course Overview

The vocational outcome of the Diploma of Sustainability skill set is to apply a working knowledge of key sustainability concepts, tools and practices to environmental, economic and social challenges, initiatives and projects within the participants own range of influence and/or practice to meet current and future industry requirements

The 4 specialist units will help students to understand:

- ✎ What sustainability means as a concept and how to apply it
- ✎ Why sustainability is important for business, society and the environment
- ✎ How sustainability relates to a broad range of industry practices and study areas
- ✎ How to develop and implement programs to support behaviour change at the individual and organisational level
- ✎ How to develop a business plan for responsive and sustainable business practices
- ✎ How to analyse the long-term outcomes of sustainable production and consumption
